

At Bukhara State University, our commitment to environmental stewardship and sustainable practices is exemplified by the establishment and active operation of the **"Ecology and Environmental Protection"** scientific research center. This center serves as a focal point for cutting-edge research, innovation and interdisciplinary collaboration aimed at addressing complex ecological challenges and fostering environmental protection across various spheres of society. With an unwavering commitment to promoting environmental consciousness and sustainable practices, this research center serves as a pivotal force in shaping the curricula, pedagogical approaches, and academic supervision that students across diverse disciplines benefit from throughout their academic journeys.

The **"Ecology and Environmental Protection"** scientific research center brings together a diverse team of esteemed researchers, professors and experts from multiple disciplines, including biology, chemistry, geology, sociology and engineering, among others. This collaborative approach allows the center to tackle multifaceted environmental issues comprehensively, driving novel solutions that contribute to the advancement of knowledge and the development of sustainable practices.

The "**Ecology and Environmental Protection**" research center takes on an integrative and interdisciplinary approach, collaborating closely with various faculties and departments within the university to ensure the infusion of environmental principles, methodologies and real-world problem-solving into the fabric of the educational experience. As such, the center significantly influences the content and structure of undergraduate programmes, fostering a deep understanding of ecological systems, environmental challenges and the imperative for responsible stewardship of our planet's resources.

Furthermore, the "**Ecology and Environmental Protection**" scientific research center actively engages with government agencies, non-governmental organizations and international partners to foster collaboration and knowledge-sharing on environmental issues of mutual concern. The center also plays an instrumental role in organizing workshops, conferences and outreach programs to raise awareness and promote environmental literacy among students, faculty and the broader community.
