

SDG2: Zero
Hunger

2 ZERO
HUNGER

1. Taking care of world population, helping them with their prior needs, showing kindness to young generation can serve as a key to develop the world from sustainable point of view. Among courageous organizations Bukhara state university is one of the leaders helping its students who are in need. It's obvious that students mainly have a big problem in food choices, living conditions or for paying tuition fee. In order to help them to get rid of such uncomfortable situations, university established one time financial aid to 482 students of all faculties with the quantity of 3 times of the basic scholarship amount. Such programs is established once a year for facilitating living condition of students on campus, solving hunger problems and diminishing the number of students who are in need.

2. Students and staff hunger interventions.

Bukhara state university takes care of each student that lives in dormitory and studies on campus. To provide interventions to prevent and alleviate hunger among students and staff national food of uzbek people always serves as a reason. During 2021, several times the occasion called "osh sayli" organized among all faculty members where national food called plov delivered to all students living in dormitory and to who have problems with food deficit.

3. Bukhara state university contains several buffets and canteens in all campuses. Each of them serves healthy, sustainable and affordable food for all members of university. University serves food for vegans, as well. Different kind of salads, milk foods, buckwheat, potato puree, pasta, cabbage products and other sustainable food can be a great choice for vegetarian diet.

4. It is highly essential that all university members can afford to dine on campus canteens. In order to make healthy, cheap and delicious diet there are wide range of food that are served in all campuses. The price is differs coming from food proportion. A person can have meal up to 20 000 sums (till 2\$). In many cases salad, tea and bread are given for free when buying a meal which is very good option for students. However, in this case the food is highly nutritious and delicious. Furthermore, all staffworking in canteen and buffets meets hygiene requirements.

5. Not only Bukhara state university buys services, but also sells its services to the public. For instance, a contract of 20 million was concluded in cooperation with the Department of Biology of the Faculty of Agronomy and Biotechnology of Bukhara State University and "IGX Ziravoti Farm" of Bukhara district. The main goal of this is to use the biopreparation "Microzym-2" to increase the resistance to diseases, to reduce the consumption of chemical mineral fertilizers or to

completely abandon them. -1 Shiny-2" cotton seed was processed. The economic effect of this contract is that the net profit from the additional yield after the application of Mikrozim-2 biopreparation to the hairy seed is 1558000 sums per hectare of cotton field, and the net profit is 1651200 sums when the hairless seed is treated. The advantages of cotton seed treated with this biopreparation are that it is environmentally safe, increases seed germination, growth energy and free yield, prevents plant root rot disease, eliminates pathogenic microflora around the seed.

6. Furthermore, a scientific-practical conference was held at Bukhara State University on the topic "Experience of specialized clusters in agriculture: experiments and innovative productions" not only for university members, but also for local farmers and food producers

7. Different faculties of Bukhara state university have tight connection with local farmers and food producers. On a daily basis, on the form of a training courses, internship and practical lessons teachers in coordination with students visit farms and learn the process of agriculture. During the conducted visit students receive sufficient information from the experts of the enterprise on the questions they are interested in on the creation of a business plan, calculation of economic efficiency, export-import mechanisms and, most importantly, the application of innovative technologies to production.
