

SDG7: Affordable
and Clean Energy

7 AFFORDABLE AND
CLEAN ENERGY

1. Energy-efficient renovation and building

"September 16 - World Ozone Layer Protection Day" at the "Ishga Marhamat" monocenter, the Bukhara regional party organization of the Ecological Party of Uzbekistan, "OOO Climate engineering", Bukhara State University, 4th course- Ecology and environmental protection education In cooperation with the students, an exhibition roundtable discussion was held on the topic "Ozone - the shell of life".

Activists of the regional party organization "Youth wing" of the Environmental Party of Uzbekistan, media representatives took part in the event.

Ozone is a thin shield of gas that surrounds our Planet, protecting the Earth from the Sun's radiation and sustaining life. If holes form in it or it becomes thinner, the biosphere will be in danger. Today, the negative effects of ultraviolet rays on humans have been studied, and it has been found that they cause skin cancer, vision loss and other dangerous diseases.

The reduction of the ozone layer is mainly affected by chlorine oxide produced by industrial enterprises. In the 80s of the 20th century, scientists discovered that the ozone layer over Antarctica has thinned twice due to human activity, and from that time the phrase "ozone hole" appeared. The ozone layer is also called the life shell of the Earth, and it is the duty of each of us to preserve it.

Those who spoke at the event emphasized that the role of the younger generation in preserving and protecting the Ozone layer is incomparable. Also, the danger of modern technologies (refrigerators, air coolers) on ozone was explained. At the same time, it was emphasized that it is necessary to introduce cost-effective, ecologically clean technologies and to consistently carry out nature protection measures in solving environmental problems.
